Cloud cost management

Establish favored pricing

Allocate chargebacks

Configuration management

Real-time decision-making adoption

Spending Identification and real-time reporting

Address idle and underused resources

Why FinOps?

FinOps gives organizations visibility into their cloud cost and finds value in cloud investments. With FinOps, technology, finance and business teams collaborate and have shared responsibility for the organization's cloud computing and infrastructure costs.

Whether you're considering a move to the cloud or you're already there, nailing down the value—never mind the costs—of being in the cloud can be difficult. Unnecessarily complex clouds can generate unneeded costs. If this sounds. familiar, it's time to rightsize your cloud experience for real value.

You'll find that cloud cost management and optimization will free up time, money and resources that can be refocused on the end-user experience. You can expect predictable spend, optimized return—and no surprises.

- real-time financial reporting
- just-in-time data-driven processes
- collaborative cross-functional teams
- shared financial accountability
- make money—and save money
