threadfin

Microsoft Fabric/Power BI

Our specialized Microsoft Power BI services transform data into actionable insights. With data visualization, business intelligence and robust reports, you'll be empowered to make data-driven decisions with confidence.

---

assessment & strategy

We assess your organization's data analytics needs, existing data sources and business goals to develop a comprehensive Power BI strategy that includes data modeling and visualization.

data integration

Power BI can be integrated with various data sources—including databases, cloud services, Excel files and more—to create unified and real-time data connections.

data modeling & transformation

Designing data models and implementing ETL (Extract, Transform, Load) processes ensures data accuracy and suitability for analysis within Power BI.

dashboard &report development

We create interactive dashboards, reports and visualizations with Power BI's tools and features to provide stakeholders with meaningful insights.

automate, publish & share reports

Automating report generation and distribution ensures that stakeholders receive up-to-date information. Reports and dashboards can be shared safely with internal and external stakeholders.

data source optimization

We assess and optimize data sources for Power BI to ensure data quality and minimize data preparation efforts.

integration services

We integrate Power BI with other Microsoft products (Azure, Dynamics 365, SharePoint, etc.) and third-party applications to create comprehensive analytics solutions.

data lineage, documentation

Our documentation of data sources, transformations and lineage maintains data transparency and traceability.

performance optimization

Power BI solutions are tuned for optimal performance. That includes data refresh schedules, query optimization and report loading times.

performance monitoring

We implement monitoring and alert systems to proactively identify issues and bottlenecks in Power BI solutions.

Experience is our DNA.

Human-centered digital transformation is the best way to transform, modernize, optimize and secure organizations. Our Experience ThreadingFramework illustrates the way we continuously improve the digital experience for employees and their customers.
