

Microsoft Power Automate

Our team of approachable experts use Microsoft Power Automate (formerly Microsoft Flow) to empower organizations by streamlining processes, boosting operational efficiency and elevating overall productivity.

analysis & assessment

We assess your organization's existing workflows and processes to identify areas where automation with Power Automate can improve efficiency and productivity.

workflow development

Using Power Automate, we design and build custom workflows tailored to your organization's needs. This may include automating approval processes, data entry, notifications and more.

integration services

We integrate Power Automate with other Microsoft products (SharePoint, Microsoft 365, Dynamics 365, etc.) and third-party applications (like Salesforce) to create seamless end-to-end processes.

approval workflows, notification & alerts

Not only do we design and implement approval workflows (commonly used for processes like expense approvals, leave requests and document reviews), but we create automated notifications and alerts that trigger for important events or required actions.

integration & migration

We assist with data integration and migration tasks to ensure that data is properly transformed and moved between systems.

transformation & manipulation

Power Automate can be used to transform and manipulate data as it flows between systems. We support complex data transformations.

scalability & expansion

We plan and implement solutions that accommodate growth and scale as your automation needs evolve.

security & compliance

Sensitive information is protected when we meet security and compliance standards like data encryption, access control and auditing.

performance optimization

We monitor and optimize Power Automate workflows continuously to improve efficiency and reduce processing times.

support & maintenance

Our post-implementation support services include troubleshooting, addressing issues and making necessary workflow adjustments.

Delivery excellence is our heart.

With a national footprint and global delivery, Threadfin has provided delivery excellence for 20 years. We leverage our AWS and Microsoft expertise to achieve business outcomes. Through each technology shift, we maintain our position as trusted digital transformation experts and advisors.
