

Microsoft Web Application Development & Migration

Our application development teams excel at managing all facets of the development journey. We're experts in crafting web and Windows applications that align with your business needs.

evaluation

First, we learn your business, get familiar with your legacy applications and understand your requirements—both functional and non-functional. From there, we identify the scope of work.

coding & customization

Our team follows development best practices. These include maintaining code quality, unit test code coverage, design patterns for code reusability, scaffolding, clean architecture solutions and test-driven development.

development plan & methodology

We prioritize development features and create a road map with timelines based on our needs assessments with users and stakeholders. Threadfin follows the Agile sprint methodology for feature development and product/application review.

project governance

Our project governance framework defines things like risk management, timelines, budgets, stakeholder and people management, project planning, documentation, data security, privacy, project management strategies and change management.

security & compliance

Our team follows OWASP (Open Worldwide Application Security Project) guidelines for web application development. We integrate identity management systems like OKTA, Microsoft Entra ID (formerly Azure AD), etc.

training & demonstration

We provide demonstrations of the application, create user manuals and FAQs, and provide on-call technical support.

support

Our commitment extends beyond application development and data migrations. We offer ongoing technical support to remediate challenges and ensure smooth operations post-release/implementation.

design & Implementation

The applications we design are highly scalable, available, fault tolerant and cost optimized for the long run. We aim for zero-down time while releasing new application features.

Value creation is our calling.

The future of IT delivery is experience-driven and outcome-focused. When we combine the two, we create incredible value. Threadfin continuously improves the digital experience for employees and their customers to create happier, faster, smarter and safer ways of getting work done every day.
