threadfin

AWS Cloud Optimization – Powered by Threadfin

Go from legacy infrastructure with Microsoft licensing dependencies to a fully optimized cloud that saves you money. Learn how to right-size resources, reduce spend and improve employee and customer experience in the process.

Whether you're considering a move to the cloud or you're already there, nailing down the value—never mind the costs—of being in the cloud can be difficult. Our process is straightforward with easy-to-understand outcomes that will set you on the path to success.

1 When we apply the AWS Optimization and Licensing Assessment (AWS OLA) to your environment, we first assess current on-premises and cloud environments (based on actual resource utilization), third-party licensing and application dependencies.

Uncover & Address:

- Infrastructure provisioning & utilization
- Server & application migration readiness
- License dependencies
- Estimated total cost of ownership for AWS cloud adoption & migration
- Employee & customer impacts

2 Then we provide you with a plan to rightsize your resources and potentially save on licensing costs. You'll see the recommended architecture end-state that accounts for your employee and customer use cases.

Highlights:

- Optimize your cloud—you'll know exactly what you have and exactly what you need to do
- Architected ideal design for your organization—all while considering the experience of your users
- Funding may be available

Value creation is our calling.

The future of IT delivery is experience-driven and outcome-focused. We combine these two to create incredible value. Threadfin continuously improves the digital experience for employees and their customers to create happier, faster, smarter and safer ways of getting work done every day.
