

Threadfin's SecOps & Cybersecurity services protect your organization by reducing risk through integrated security tools, processes & technologies.

Strategy

- Cybersecurity consulting
- Customized security strategies
- Collaboration & knowledge sharing

Implementation

- Endpoint security
- Network security
- East-west traffic
- North-south traffic

Recovery

- Business continuity & disaster recovery (BC/DR)
- Ransomware

SecOps is the collaboration between IT security and operations teams to integrate the tools, processes and technology that keep an organization secure while reducing risk.

Cybersecurity protects digital assets, data and systems through strategy, policies, practices, technologies and frameworks.

SecOps implements and operationalizes security within the parameters defined by cybersecurity.

As businesses increasingly rely on the cloud for operations and resources, the security risks posed by applications, endpoints, infrastructure and users become more challenging to visualize and more difficult to respond to.

That's where we come in.

Preventative, Responsive, Rapid & Seamless Solutions

Preventative

The need to evolve as criminals do—and even get ahead of them—has never been more pressing. We address security risks at the earliest stage of planning and development—and every stage thereafter.

Rapid

In the event of a security breach, quick and efficient recovery is paramount. Our strategies include comprehensive backup solutions, disaster recovery planning and incident response services designed to restore your operations with minimal downtime and data loss.

What Can You Expect With Threadfin?

Teamwork

Our multidisciplinary outlook raises awareness and inspires imaginative solutions. We proactively leverage the expertise of the IT organization to work as a collaborative team.

Reaction speed

We use integrated communication, detection and resolution systems that speed up the decision-making process by identifying and quickly remediating vulnerabilities.

Responsive

Our strategies include monitoring, continuous assessment of your security posture and rapid incident response. We integrate proactive measures with operational protocols, ensuring that your security can adapt quickly to any emerging threat.

Seamless

With a holistic approach to optimized security, we integrate tools, processes and technology to secure your organization—all while ensuring a seamless user experience.

Trust

Cross-functional teams keep security and product deployment in line with your organization's ultimate goal: to deliver trustworthy products and services as efficiently as possible.
