

## Cybersecurity

Our comprehensive security solutions protect your organization against evolving cyber threats. We safeguard your data & infrastructure, ensuring business continuity.

### Security Solutions & Services

#### Cybersecurity consulting

- Comprehensive security assessments
- Ransomware prevention & mitigation strategies

#### Zero-trust architecture

- Network segmentation & micro-segmentation
- Continuous monitoring & validation
- Secure access solutions for users & devices

#### Access management

- Multi-Factor Authentication (MFA)
- Privileged Access Management (PAM) & Identity-Privileged Access Management (IPAM)
- Identity & Access Management (IAM)
- Network Access Control (NAC) & Dynamic Network Access Control (DNAC)

#### Business continuity & disaster recovery (BC/DR)

- Disaster recovery planning & implementation
- Data backup & recovery solutions
- Business continuity strategies & testing
- Crisis management & incident response planning

#### Endpoint security

- Antivirus & anti-malware protection
- Endpoint detection & response (EDR)
- Secure mobile device management (MDM)
- Device encryption & data loss prevention (DLP)

#### Network security

- Firewall & perimeter security
- Secure VPN solutions
- Network traffic analysis & monitoring
- Intrusion detection & prevention systems (IDPS)

### East/West Traffic

**This is the flow of data within the internal network, specifically between servers, applications & other internal endpoints.**

- Micro-segmentation services: We divide your network into smaller, isolated segments to enhance security & control.
- Internal traffic monitoring & threat containment: We continuously monitor for any suspicious activity & contain threats before they spread.

### North/South Traffic

**These perimeter security measures protect your network from external threats and secure incoming & outgoing traffic.**

- Perimeter firewall implementation: We set up robust firewalls at the network perimeter to filter & block unauthorized access.
- Web application firewalls (WAF): We deploy specialized firewalls to protect your web applications from attacks & ensure safe data exchange.
