

POWERED BY THREADFIN →

EXPERT ACCESS Infrastructure, Cybersecurity & Cloud

Extend your team with senior infrastructure, cybersecurity and cloud expertise—without the overhead of full-time staff. Modern IT environments are complex—spanning firewalls, SD-WAN, cloud connectivity, identity, endpoint management and compliance. Many IT teams struggle to maintain deep expertise across all these technologies, especially with senior engineers in high demand. Threadfin Expert Access closes that gap.

Through a quarterly retainer, you get certified senior engineers and architects across infrastructure, cybersecurity and cloud solutions—helping you reduce risk, improve uptime and accelerate projects without the overhead of full-time staff.

HOW IT WORKS

- 1 Unified resource pool:** Hours can be applied to engineering or architectural support
- 2 Quarterly contract:** Flexible pool of hours, renewed every quarter
- 3 Scheduled work:** Predictable delivery aligned to your operational needs
- 4 Reports:** Monthly usage & activity reports to track progress & outcomes

KEY BENEFITS

Faster issue resolution: Immediate access to senior engineers means less downtime & quicker recovery

Lower costs, better results: Avoid full-time hiring while achieving enterprise-grade stability & performance

Stronger decision-making: Use hours for strategic both day-to-day tasks and strategic planning

Predictable operations: Quarterly retainer with transparent pricing gives you budget certainty

Proactive improvement: Quarterly assessments identify risks, strengthen compliance readiness & build actionable roadmaps

Improved continuity: Escalation coverage available to keep critical systems resilient

VALUE

Reduce risk. Senior engineers help prevent outages & strengthen your security posture.

Increase uptime. Faster resolution & continuity support keep operations running.

Escalation. Includes priority escalation access to our team during critical events.

Control costs. Simple quarterly model provides enterprise expertise without the overhead of full-time hires.

USE CASES & OUTCOMES

Firewall & network optimization: Strengthen security posture, reduce audit findings, improve uptime

WAN & hybrid connectivity: Simplify WAN, cut costs & ensure secure access across cloud & data center

Data center fabrics & load balancing: Improve application performance, resiliency & availability

Endpoint & identity protection: Harden devices & access controls to reduce breach risk

Compliance & data governance: Enforce policies for sensitivity, data loss prevention & reporting

Endpoint management: Baseline configurations, compliance checks & automated provisioning
